

Diseased bush appears to have a fungus.

Diseased bush is here.

There are four total bushes, all in close proximity to one another. Only one appears to be diseased at this time.

Burning Bushes

There are three Burning Bushes that are out of control, planted too close to the house and too large for me to maintain. I think they have to come out.

All the bushes are planted too close to one another. Only the Burning Bushes are in need of removal unless the diseased bush needs to be removed due to the fungus.
